Job Separator

Sort, classify and allocate documents
is easy with e-BRIDGE Job Separator.

Toshiba e-BRIDGE Job Separator Reduce Workflow Problem and Improve Efficiency

e-BRIDGE Job Separator is Toshiba's own developed software that expands the capabilities of your MFP's printer driver. e-BRIDGE Job Separator makes it possible to take a single print job and divide it as required. These are automatically subdivided through the use of separator pages which can also be printed upon.

Keep Everything In Order with e-BRIDGE Job Separator.

Easy to use, fast and cost-effective

- e-BRIDGE Job Separator is easy to use - installation is simple.
- No training is required.
- e-BRIDGE Job Separator is fast - allows user to quickly create multiple sets of a job and divide them automatically.
- It is cost effective due to time savings – which means that you save the wage costs for all the counting, sorting and manual addressing of the printouts.

The advantages are clear

- You can take print jobs of various sizes such as newsletters, worksheets, or forms and automatically sort them as needed.
- No need for manual work like counting the number of printouts, labelling and sorting sets of documents into batches.
- Reduces errors when dividing up prints: information on the number of copies or user information can be printed onto the automatic inserted separator pages.
- Allows you to save frequently used settings as a template which can be easily recalled for batch print jobs performed on a regular basis.

Pre-requisites
